Trusted foundations. Lasting Futures.

## NGUNI SEMIFACE

Info Sheet

### Classification | Face Brick Aesthetic:

Clay bricks that are selected or produced for their durability and aesthetic effect deriving from non-uniformity of size, shape and colour.

### Abbreviation: FBA

### Texture & Features:

Satin - A smooth or subtly grainy to the touch surface; with a grooved reverse side designed to guide correct placement without compromising the clean, refined face of the brick.

**Please note:** Product samples, brochures and displays are intended as a general guide only. While Federale Stene takes care to represent its bricks as accurately as possible, natural variations in colour, texture and finish can occur. For the most accurate representation, we recommend viewing a sample or building an on-site sample wall for client and contractor approval prior to construction.
